

1 Adding an SSH Key to GitHub and Cloning a Repository

1.1 Check for Existing SSH Keys

Open a terminal and check whether you already have an SSH key pair.

```
ls -al ~/.ssh
```

Look for files named `id_ed25519` / `id_ed25519.pub` or `id_rsa` / `id_rsa.pub`. If these exist, skip to the “Add the Key to GitHub” step.

1.2 Generate a New SSH Key

```
ssh-keygen -t ed25519 -C "your_email@example.com"
```

1.3 Start the SSH Agent and Add Your Key

```
eval "$(ssh-agent -s)"  
ssh-add ~/.ssh/id_ed25519
```

1.4 Copy the Public Key

```
cat ~/.ssh/id_ed25519.pub
```

1.5 Add the Key to GitHub

1. Log in to GitHub and go to **Settings**.
2. Click **SSH and GPG keys** in the sidebar.
3. Click **New SSH key**, give it a title, and paste the key.
4. Click **Add SSH key**.

1.6 Test the Connection

```
ssh -T git@github.com
```

1.7 Clone a Repository Using SSH

```
git clone git@github.com:username/repository.git
```
